# The Yoda drive (WebDAV)

The yoda system can be mounted as a network location / drive.

To do so your account needs to be added to the yoda system by a "yoda groupmanager".
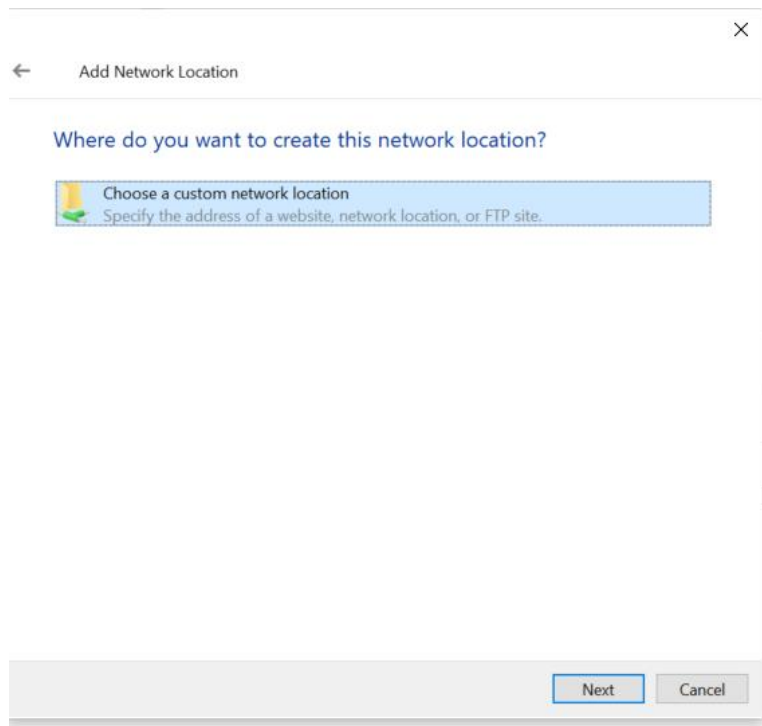

The address of the WebDAV location is https://webdav-mitarget.medfdm.uni-kiel.de.
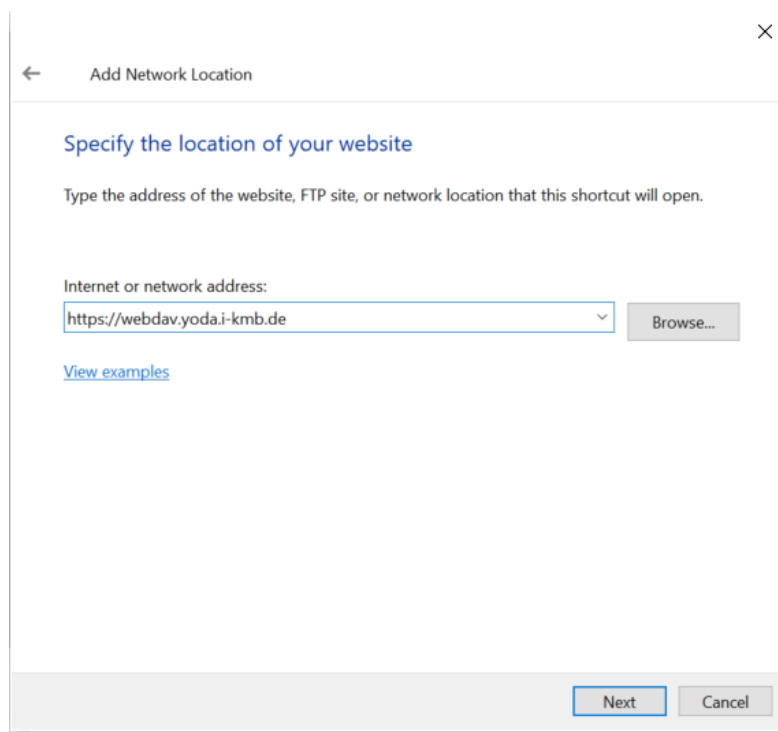

Windows

Enter the File Explorer and right click on "This PC".

when you choose "Add a network location" a wizard opens and helps you to connect the the network location.

Click on "Choose a custon network location" and click on "Next".

Use (https://webdav-mitarget.medfdm.uni-kiel.de) in the address field and click "Next".

You can choose any name you want to for this network location. Enter the name in the field and click "Next".

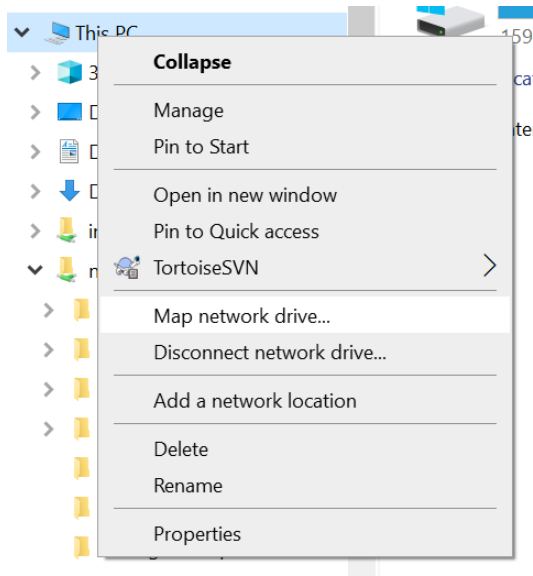

Click "Finish" to finish the process.

After entering your credentials, the network location can be found in the file explorer and can be used like other folders.
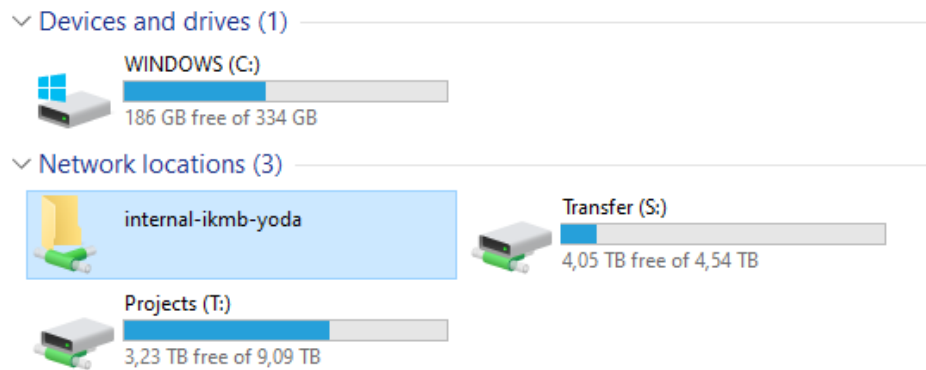

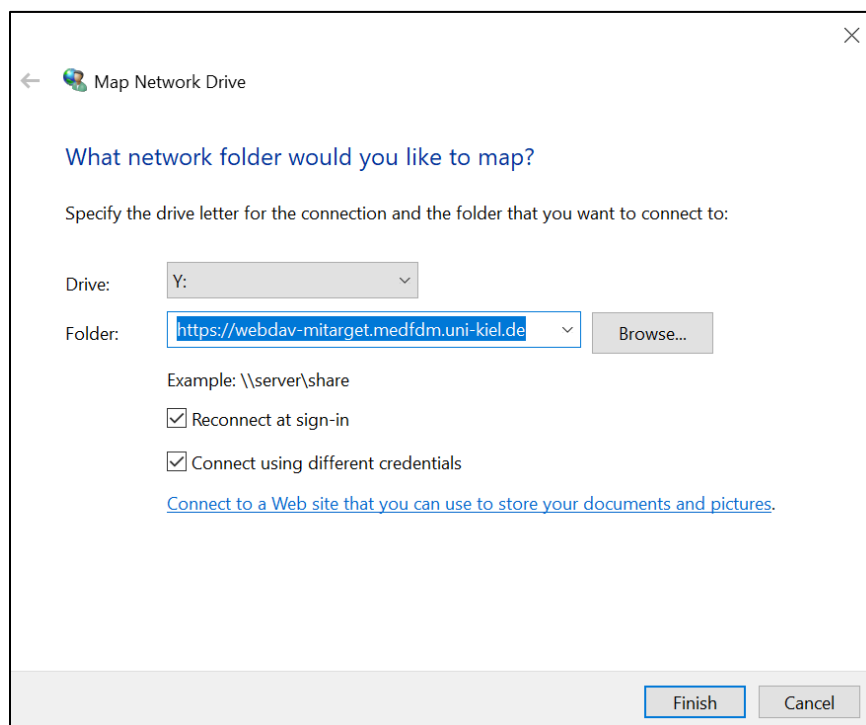

Network drive in Windows:

Open File Explorer; right click on This PC; choose Map network drive ..

Choose Letter; enter the address (https://webdav-mitarget.medfdm.uni-kiel.de)
